Chronic Pain in Small Animal Medicine

Description: Chronic pain is unlike acute pain, it lasts beyond the time necessary for healing and resists normal treatment. No one patient feels pain in the same way and yet in veterinary medicine the patient's gain is generally assessed based on a single standard.

There is an increasing focus in veterinary medicine on measuring and resolving pain and suffering. This focus is being supported by an increased understanding of pain neurophysiology, a greater offering of innovative pharmacological treatments, and consumer demand.

This book is written for the veterinary health care professional seeking a greater depth of knowledge in the mechanisms of pain accompanying chronic disease states, and the potential targets for treatment. It goes beyond common protocols by focusing on the latest evidence and our understanding of ‘why and how to treat’. It describes and evaluates current physiological and biochemical theories of pain transmission, without losing sight of the practical need for such information.

Key features:
- Timely: new veterinary focus on measuring and relieving pain
- Reflects the latest evidence on why and how to treat individual animals
- Thorough, well-illustrated guide by a leading authority

This book provides a foundation for advances in animal care and welfare and is of value to veterinarians in practice and training.

Contents:

- PREFACE
- ACKNOWLEDGEMENTS
- CONTRIBUTORS
- ABBREVIATIONS

SECTION I
- Chapter 1: Physiology of pain
- Chapter 2: Pathophysiology of osteoarthritic pain
- Chapter 3: Pathophysiology of cancer pain

SECTION II
- Chapter 4: Pharmacologics (drug classes)
- Chapter 5: Nonsteroidal anti-inflammatory drugs
- Chapter 6: Nutraceuticals

SECTION III
- Chapter 7: Multimodal management of pain
- Chapter 8: Multimodal management of canine osteoarthritis
- Chapter 9: Chronic pain in selected physiological systems: ophthalmic, aural, and dental
