Primary Hyperlipidemias: An Atlas of Investigation and Diagnosis

Description: In this exciting new volume, the authors draw upon a rich collection of visual material to explore the full range of primary hyperlipidemias. By referring to hundreds of high quality images included in this ground-breaking work, the physician using this book can identify and diagnose the whole spectrum of lipid disorders at the earliest possible stage. In addition, they illustrate how lipid disorders may disrupt other organ systems, sometimes without any symptoms being manifested, and present initially to specialists in fields as diverse as rheumatology, dermatology, orthopaedics or ophthalmology with a further risk of misdiagnosis.

A comprehensively illustrated guide to diagnosis, this atlas will assist cardiologists, endocrinologists, primary care physicians and others healthcare professionals in their daily task of making an accurate assessment of the patient and then formulating the most effective management programme for each manifestation of this highly complex group of disorders: illustrates the appearance of commonplace presentations as well as rare and complex disorders; relates observed signs of disease with underlying metabolic disease processes; comprehensive accounts of each condition’s clinical characteristics permit early diagnosis of disease and more effective treatment; reviews key investigative procedures including use of biomarkers, with notes on gene and protein structures including important mutations; extensive references clarify complexities of classification and nomenclature.

Benefits:
- First atlas of its kind, presenting science of lipid disorders in a clinical context
- Provides comprehensive description of clinical presentations permitting early diagnosis of disease
- Ready to-use-information in an easily accessible format for both specialists & general physicians

Readership:
- Hospital physicians
- Cardiologists
- Diabetologists
- Endocrinologists and other Specialist Physicians
- GPs
- Doctors in training

Contents:
Preface
Acknowledgements
Abbreviations

1. Hereditary Hypercholesterolemas
   Introduction
   Dominant monogenic forms
   Familial hypercholesterolemia
   Familial defective apolipoprotein B-100
   Autosomal dominant hypercholesterolemia (FH3)
   Deficiency of cholesterol 7α-hydroxylase (CYA1)
   Recessive forms
   Autosomal recessive hypercholesterolemia (ARH)
   Lysosomal acid lipase deficiency
   Polygenic, sporadic and multifactorial hypercholesterolemas

2. Hereditary Hypertriglycerideridemias
   Lipoprotein lipase deficiency (familial hyperchylomicronemia)
   Familial endogenous hypertriglycerideridemia (familial hypertriglycerideridemia)
   Familial mixed hypertriglycerideridemia (type V, MHTG)

3. Inherited Mixed Dyslipoproteinemias
   Familial combined hyperlipidaemia
Familial dysbetalipoproteinemia and remnant excess
Classical dysbetalipoproteinemia type III
Other inherited causes of remnant excess
Apolipoprotein E deficiency
Apolipoprotein E mutations, dominant type III and lipoprotein glomerulopathy
Hepatic lipase deficiency
Pseudo type III hyperlipoproteinemia
Other dyslipidemic conditions associated with apolipoprotein E

4. Inherited Dyslipoproteinemias of Various Etiologies
Familial lipoprotein(a) hyperlipoproteinemia
Familial phytosterolemia (ABCG5-ABCG8 defects)
Familial hyperalphalipoproteinemia and cholesteryl ester transfer protein deficiency
Familial hyperalphalipoproteinemia
Cholesteryl ester transfer protein deficiency
Alagille's syndrome and progressive familial intrahepatic cholestasis
