Progress in Functional Manufacturing Technologies I

Description: Series: Key Engineering Materials, Volume 458

The present volume consists of a collection of peer-reviewed papers covering manufacturing process simulation, vibration measurement and reliability analysis, finite element analysis and structure optimization, fault diagnosis and maintenance theory, complex mechanical-electro-liquid systems, effect of machining methods or techniques upon material mechanical properties (such as their effect upon stress states, fatigue resistance, etc.), quality control of manufacturing systems, and so on.

This book will be essential reading for production and research engineers, and also for research students and academics interested in these fields.
