# Alpha6 Beta4 Integrin Signaling Pathway in Oncology Drug Pipeline Update

**Description:**
The Alpha6 Beta4 Integrin signaling pathway activates the PI 3-kinase/Akt, MAPK/NFkB and SMAD signaling modules.

There are today 370 companies plus partners developing 510 Alpha6Beta4 integrin pathway targeting drugs in 1683 developmental projects in cancer. In addition, there are 2 suspended drugs and the accumulated number of ceased drugs over the last years amount to another 203 drugs. Alpha6 Beta4 Integrin Signaling Pathway In Oncology Drug Pipeline Update lists all drugs and gives you a progress analysis on each one of them. Identified drugs are linked to 185 different targets. All included targets have been cross-referenced for the presence of mutations associated with human cancer. To date 182 out of the 183 studied drug targets so far have been recorded with somatic mutations. The software application lets you narrow in on these mutations and links out to the mutational analysis for each of the drug targets for detailed information. All drugs targets are further categorized on in the software application by 43 classifications of molecular function and with pathway referrals to BioCarta, KEGG, NCI-Nature and NetPath.

**How May Drug Pipeline Update Be of Use?**
- Show investors/board/management that you are right on top of drug development progress in your therapeutic area.
- Find competitors, collaborations partners, M&A candidates etc.
- Jump start competitive drug intelligence operations
- Excellent starting point for world wide benchmarking
- Compare portfolio and therapy focus with your peers
- Speed up pro-active in-/out licensing strategy work
- Fast and easy way of tracking drugs using search engines; just one click from inside the application and you may search the World Wide Web and PubMed for any drug.

Note: You are able to sort and find drugs according to developmental stage from drop-down menu in the application.

**Indications**
Included Alpha6Beta4 integrin pathway targeting drugs are also in development for 194 other indications,
where 145 are different cancer indications.

Note: You are able to find and sort drugs according to type of indication from drop-down menu in the application.

Targets
Mutations
All targets are cross-referenced with the Catalogue of Somatic Mutations in Cancer (COSMIC). It is designed to store and display somatic mutation information and related details and contains information relating to human cancers. To date 182 out of the 183 studied drug targets so far have been recorded with somatic mutations and the software application lets you narrow in on these mutations and links out to the mutational analysis for each of the drug targets for detailed information.

Biological Structures
The identity of available biological structures on 156 drug targets was retrieved from the RCSB Protein Databank for you to easily review the 3465 structures available today among drug targets.

Identified drugs are linked to more than 185 different targets, divided into 43 classifications of molecular function:
- Antigen binding
- Auxiliary transport protein activity
- Catalytic activity
- Cell adhesion molecule activity
- Chaperone activity
- Cysteine-type peptidase activity
- Cytokine activity
- Deacetylase activity
- DNA binding
- DNA topoisomerase activity
- G-protein coupled receptor activity
- Growth factor activity
- GTPase activity
- Isomerase activity
- Kinase activity
- Kinase binding
- Ligand-dependent nuclear receptor activity
- Lipid kinase activity
- Lipid phosphatase activity
- Molecular function unknown
- Oxidoreductase activity
- Peroxidase activity
- Protease inhibitor activity
- Protein binding
- Protein serine/threonine kinase activity
- Protein threonine/tyrosine kinase activity
- Protein tyrosine phosphatase activity
- Protein-tyrosine kinase activity
- Receptor activity
- Receptor binding
- Receptor signaling complex scaffold activity
- Receptor signaling protein tyrosine phosphatase activity
- Structural constituent of cytoskeleton
- Structural molecule activity
- Superoxide dismutase activity
- T cell receptor binding
- Transcription factor activity
- Transcription regulator activity
- Translation regulator activity
- Transmembrane receptor activity
- Transmembrane receptor protein tyrosine kinase activity
- Transporter activity
- Ubiquitin-specific protease activity
Sub-Cellular Localization

Identified targets are categorized into 33 different primary and alternate sub-cellular localizations:
- Cell projection
- Centrosome
- Chromosome
- Clathrin-coated vesicle
- Cytoplasm
- Cytoplasmic vesicle
- Cytoskeleton
- Cytosol
- Early endosome
- Endoplasmic reticulum
- Endosome
- Extracellular
- Focal adhesion
- Golgi apparatus
- Integral to membrane
- Kinetochore
- Late endosome
- Lysosome
- Microtubule
- Mitochondrial membrane
- Mitochondrion
- Nuclear membrane
- Nucleolus
- Nucleoplasm
- Nucleus
- Perinuclear region
- Perinuclear vesicle
- Peroxisome
- Plasma membrane
- Ribosome
- Sarcoplasmic reticulum
- Secreted
- Vesicle

Note: You are able to find and sort drugs according to target gene name, protein name, molecular function of target, target localization, presence of mutations and availability of biological structures of target from drop-down menus in the application.

Target Expression Profile

Direct links are provided from inside the application to 291 protein expression profiles of 174 drug targets in various human tissues and cancer types, cell lines and primary cells, including up to:
- 48 different normal tissue types
- 20 different types of cancer
- 47 cell lines
- 12 samples of primary blood cells

Pathway Referals

Identified targets have been cross referenced against their involvement in different cellular pathways, according to BioCarta, KEGG, NCI-Nature and NetPath.
- BioCarta# 215 Pathways
- KEGG# 157 Pathways
- NCI-Nature# 246 Pathways
- NetPath# 32 Pathways

Note: You are able to find and sort drugs according to targeted pathways from drop-down menus in the application.

Mechanism

In total there are different drug mechanism of action represented in this Drug Pipeline Update.
Note: You are able to find and sort drugs according to mechanism of action from drop-down menu in the application.

Compound
Identified drug compounds are described by:

Compound type, Chemical name, CAS Number and molecular weight

Note: You are able to sort and find drugs according to compound type from drop-down menu in the application.

Drug Profile
Progress analysis and review of drug development. A typical drug profile reports on, depending on stage of development and available information:

Drug Name & Synonyms
Presentation of drug name and synonyms

Principal Company & Partners
Presentation of principal company and partners

Target and Molecular Function of Target
Described target(s) is/are presented with:
  Official Gene Symbol – Chromosome Location – Gene & Protein Name – Molecular Function

Target Localization
Described target(s) is/are presented with primary and alternate localizations.

Target Expression Profiles
Links to protein expression profile(s) of target(s) in various human tissues, cell lines and primary cells, including up to:
  48 different normal tissue types
  20 different types of cancer
  47 cell lines
  12 samples of primary blood cells

Mutation
All targets are cross-referenced with the Catalogue of Somatic Mutations in Cancer (COSMIC). It is designed to store and display somatic mutation information and related details and contains information relating to human cancers.

Biological Structures
The identity of available biological structures on drug targets was retrieved from the RCSB Protein Databank for you to easily review what available structures of drug targets exist.

Targeted Pathways
Described target(s) is/are matched for the involvement in cellular pathways according to BioCarta, KEGG, NCI-Nature and NetPath.

Mechanism
Drug mechanism of action

Developmental Projects
Summary field of developmental projects for the drug, including indication, developmental stage and status.
Example:
  Cancer, myeloma – Phase II Clinical Trial – Active
  Cancer, prostate – Phase III Clinical Trial – Ceased

Drug BioSeeker Group’s software
Short introduction to drug

Compound Data
Compound type, Chemical name, CAS Number and molecular weight
Patent Data
Available patent information related to the drug is presented here.

Fillings and Approvals
Approvals and submissions
Analyst comments

Deals & Licensing
Collaborations and deals
Availability for licensing

Phase IV Data
Available Phase IV development data, developmental history and scientific data.

Phase III Data
Available Phase III development data, developmental history and scientific data.

Phase II Data
Available Phase II development data, developmental history and scientific data.

Phase I Data
Available Phase I development data, developmental history and scientific data.

Phase 0 Data
Available Phase 0 development data, developmental history and scientific data.

Preclinical Data
Available preclinical development data, developmental history and scientific data.

Discovery Data
Available discovery development data, developmental history and scientific data.

Application Features
Search, Find and Filter Panel with Initial Result Presentation
With this panel you can define your selectivity in each drug search with up to 24 different drug specific parameters. Each parameter has multi-select options to them and can be used as either an inclusion parameter or exclusion parameter.

The initial result table is a dynamic sortable table which gives you a fast overview of found results and can be narrowed down further by your own additional keywords.

Direct linkage from inside the application to related internet resources
- Drug data is linked to search engines like Google and PubMed
- Drug target data is linked directly to BioCarta, Human Protein Atlas, KEGG, NCI-Nature, NetPath etc.
- Direct links to company web pages of companies

Dynamic Report Generator
Our dynamic report generator lets you with ease and speed generate html reports directly in your web browser (Internet Explorer and FireFox), whether it is a single drug profile or an entire search you want have a report of.

System Requirements
- Operating system: Windows (2000/XP/Vista/7/8) for Mac Users the service is only available online
- Browser Application (Internet Explorer, Firefox, Chrome, Safari)
- Internet access (to access related internet resources)

Ordering:
Order Online - http://www.researchandmarkets.com/reports/1537322/
Order by Fax - using the form below
Order by Post - print the order form below and send to
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit http://www.researchandmarkets.com/contact/

Order Information
Please verify that the product information is correct and select the format(s) you require.

Product Name: Alpha6 Beta4 Integrin Signaling Pathway in Oncology Drug Pipeline Update

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:
Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: Please transfer funds to:
Account number 833 130 83
Sort code 98-53-30
Swift code ULSBIE2D
IBAN number IE78ULSB98533083313083
Bank Address Ulster Bank,
27-35 Main Street,
Blackrock,
Co. Dublin,
Ireland.
