Androgen Receptor Signaling Pathway in Oncology Drug Pipeline Update

Description:
The androgen receptor signaling pathway activates the SMAD signaling module.

There are today 440 companies plus partners developing 539 Androgen Receptor drugs in 1743 developmental projects in cancer. In addition, there are 2 suspended drugs and the accumulated number of ceased drugs over the last years amount to another 254 drugs. Androgen Receptor Signaling Pathway In Oncology Drug Pipeline Update lists all drugs and gives you a progress analysis on each one of them. Identified drugs are linked to 226 different targets. All included targets have been cross-referenced for the presence of mutations associated with human cancer. To date 223 out of the 224 studied drug targets so far have been recorded with somatic mutations. The software application lets you narrow in on these mutations and links out to the mutational analysis for each of the drug targets for detailed information. All drugs targets are further categorized on in the software application by 52 classifications of molecular function and with pathway referrals to BioCarta, KEGG, NCI-Nature and NetPath.

How May Drug Pipeline Update Be of Use?
- Show investors/board/management that you are right on top of drug development progress in your therapeutic area. * Find competitors, collaborations partners, M&A candidates etc. * Jump start competitive drug intelligence operations * Excellent starting point for world wide benchmarking * Compare portfolio and therapy focus with your peers * Speed up pro-active in-/out licensing strategy work * Fast and easy way of tracking drugs using search engines; just one click from inside the application and you may search the World Wide Web and PubMed for any drug.

Drug Pipeline Update at a Glance

Investigators
Includes more than 440 principal companies plus their collaborators. There is direct access from inside the application to web pages of all principal companies.

Note: You are able to sort and find drugs according to companies and partners from drop-down menus in the application. You may also sort and find drugs according to country of companies.

Drug name & Synonyms
Lists commercial, generic and code names for drugs.

Developmental stage
This Drug Pipeline Update contains 539 Androgen Receptor drugs in development, which have a total of 1743 developmental projects in cancer. In addition there are suspended and ceased drugs.

Pipeline Breakdown According to Number of Drugs
Marketed# 45
Registered# 1
Pre-registration# 6
Phase III# 48
Phase II# 163
Phase I# 185
Preclinical# 266
No Data# 16
Suspended# 2
Ceased# 254

Note: You are able to sort and find drugs according to developmental stage from drop-down menu in the application.

Indications
Included Androgen Receptor drugs are also in development for 222 other indications, where of 143 are different cancer indications.
Note: You are able to find and sort drugs according to type of indication from drop-down menu in the application.

Targets
Mutations
All targets are cross-referenced with the Catalogue of Somatic Mutations in Cancer (COSMIC). It is designed to store and display somatic mutation information and related details and contains information relating to human cancers. To date 223 out of the 224 studied drug targets so far have been recorded with somatic mutations and the software application lets you narrow in on these mutations and links out to the mutational analysis for each of the drug targets for detailed information.

Biological Structures
The identity of available biological structures on 185 drug targets was retrieved from the RCSB Protein Databank for you to easily review the 3940 structures available today among drug targets.

Identified drugs are linked to more than 226 different targets, divided into 52 classifications of molecular function:
- Acid phosphatase activity
- ATPase activity
- Auxillary transport protein activity
- Carboxypeptidase activity
- Catalytic activity
- Cell adhesion molecule activity
- Chaperone activity
- Chromatin binding
- Cysteine-type peptidase activity
- Cytokine activity
- Cytoskeletal protein binding
- Deacetylase activity
- Deaminase activity
- DNA binding
- DNA repair protein
- DNA topoisomerase activity
- G-protein coupled receptor activity
- Growth factor activity
- GTPase activity
- Heat shock protein activity
- Hormone activity
- Kinase activity
- Kinase binding
- Kinase regulator activity
- Ligand-dependent nuclear receptor activity
- Ligase activity
- Lipid kinase activity
- Lipid phosphatase activity
- Metallopeptidase activity
- Molecular function unknown
- Oxidoreductase activity
- Peroxidase activity
- Phosphoric diester hydrolase activity
- Protein binding
- Protein serine/threonine kinase activity
- Protein threonine/tyrosine kinase activity
- Protein-tyrosine kinase activity
- Receptor activity
- Receptor binding
- Receptor signaling complex scaffold activity
- Serine-type peptidase activity
- Structural constituent of cytoskeleton
- Superoxide dismutase activity
- T cell receptor binding
- Transcription factor activity
- Transcription regulator activity
- Translation regulator activity
- Transmembrane receptor activity
- Transmembrane receptor protein tyrosine kinase activity
- Transporter activity
- Ubiquitin-specific protease activity
- Voltage-gated ion channel activity

Sub-Cellular Localization
Identified targets are categorized into 31 different primary and alternate sub-cellular localizations:
- Basolateral membrane
- Cell junction
- Centrosome
- Chromosome
- Clathrin-coated vesicle
- Cytoplasm
- Cytoplasmic vesicle
- Cytoskeleton
- Cytosol
- Endoplasmic reticulum
- Endosome
- Focal adhesion
- Golgi apparatus
- Golgi membrane
- Integral to membrane
- Kinetochoore
- Lysosome
- Mitochondrial membrane
- Mitochondrion
- Nuclear membrane
- Nucleolus
- Nucleoplasm
- Nucleus
- Perinuclear region
- Perinuclear vesicle
- Peroxisome
- Plasma membrane
- Sarcoplasmic reticulum
- Secreted
- Vesicle

Note: You are able to find and sort drugs according to target gene name, protein name, molecular function of target, target localization, presence of mutations and availability of biological structures of target from drop-down menus in the application.

Target Expression Profile
Direct links are provided from inside the application to 361 protein expression profiles of 216 drug targets in various human tissues and cancer types, cell lines and primary cells, including up to:
- 48 different normal tissue types
- 20 different types of cancer
- 47 cell lines
- 12 samples of primary blood cells

Pathway Referals
Identified targets have been cross referenced against their involvement in different cellular pathways, according to BioCarta, KEGG, NCI-Nature and NetPath.
- BioCarta# 250 Pathways
- KEGG# 176 Pathways
- NCI-Nature# 243 Pathways
- NetPath# 32 Pathways

Note: You are able to find and sort drugs according to targeted pathways from drop-down menus in the
In total there are different drug mechanism of action represented in this Drug Pipeline Update.

Note: You are able to find and sort drugs according to mechanism of action from drop-down menu in the application.

Identified drug compounds are described by:

- Compound type
- Chemical name
- CAS Number
- Molecular weight

Note: You are able to sort and find drugs according to compound type from drop-down menu in the application.

Progress analysis and review of drug development. A typical drug profile reports on, depending on stage of development and available information:

- Drug Name & Synonyms
- Presentation of drug name and synonyms

- Principal Company & Partners
- Presentation of principal company and partners

- Target and Molecular Function of Target
  Described target(s) is/are presented with:
  - Official Gene Symbol – Chromosome Location – Gene & Protein Name – Molecular Function

- Target Localization
  Described target(s) is/are presented with primary and alternate localizations.

- Target Expression Profiles
  Links to protein expression profile(s) of target(s) in various human tissues, cell lines and primary cells, including up to:
  - 48 different normal tissue types
  - 20 different types of cancer
  - 47 cell lines
  - 12 samples of primary blood cells

All targets are cross-referenced with the Catalogue of Somatic Mutations in Cancer (COSMIC). It is designed to store and display somatic mutation information and related details and contains information relating to human cancers.

The identity of available biological structures on drug targets was retrieved from the RCSB Protein Databank for you to easily review what available structures of drug targets exist.

- Targeted Pathways
  Described target(s) is/are matched for the involvement in cellular pathways according to BioCarta, KEGG, NCI-Nature and NetPath.

Drug mechanism of action

Summary field of developmental projects for the drug, including indication, developmental stage and status.

Example:
- Cancer, myeloma – Phase II Clinical Trial – Active
- Cancer, prostate – Phase III Clinical Trial – Ceased

Drug BioSeeker Group’s software
Short introduction to drug

Compound Data
Compound type, Chemical name, CAS Number and molecular weight

Patent Data
Available patent information related to the drug is presented here.

Fillings and Approvals
Approvals and submissions
Analyst comments

Deals & Licensing
Collaborations and deals
Availability for licensing

Phase IV Data
Available Phase IV development data, developmental history and scientific data.

Phase III Data
Available Phase III development data, developmental history and scientific data.

Phase II Data
Available Phase II development data, developmental history and scientific data.

Phase I Data
Available Phase I development data, developmental history and scientific data.

Phase 0 Data
Available Phase 0 development data, developmental history and scientific data.

Preclinical Data
Available preclinical development data, developmental history and scientific data.

Discovery Data
Available discovery development data, developmental history and scientific data.

Application Features

Search, Find and Filter Panel with Initial Result Presentation

With this panel you can define your selectivity in each drug search with up to 24 different drug specific parameters. Each parameter has multi-select options to them and can be used as either an inclusion parameter or exclusion parameter.

The initial result table is a dynamic sortable table which gives you a fast overview of found results and can be narrowed down further by your own additional keywords.

Direct linkage from inside the application to related internet resources
- Drug data is linked to search engines like Google and PubMed
- Drug target data is linked directly to BioCarta, Human Protein Atlas, KEGG, NCI-Nature, NetPath etc.
- Direct links to company web pages of companies

Dynamic Report Generator

Our dynamic report generator lets you with ease and speed generate html reports directly in your web browser (Internet Explorer and FireFox), whether it is a single drug profile or an entire search you want have a report of.

System Requirements
- Operating system: Windows (2000/XP/Vista/7/8) for Mac Users the service is only available online
- Browser Application (Internet Explorer, Firefox, Chrome, Safari)
- Internet access (to access related internet resources)

Ordering:  Order Online - http://www.researchandmarkets.com/reports/1537323/
Order by Fax - using the form below

Order by Post - print the order form below and send to

Research and Markets,
Guinness Centre,
Taylors Lane,
Dublin 8,
Ireland.
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit http://www.researchandmarkets.com/contact/

Order Information
Please verify that the product information is correct and select the format(s) you require.

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:
Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: Please transfer funds to:
Account number 833 130 83
Sort code 98-53-30
Swift code ULSBIE2D
IBAN number IE78ULSB98533083313083
Bank Address Ulster Bank,
27-35 Main Street,
Blackrock,
Co. Dublin,
Ireland.
