Global Tidal Energy Market 2014-2018

Description: About Tidal Energy

Tidal energy is a form of hydropower generation, which converts the energy from tides into electricity. A typical tidal power plant is run by an underwater turbine that rotates and converts mechanical power to electrical power. The electrical power thus produced is sent to the shore with the help of a generator. The commercial deployment of tidal power projects is in its nascent stage, although it has the potential for future power generation.

The analysts forecast the Global Tidal Energy market to grow at a CAGR of 24.0 percent over the period 2013-2018.
