Cancer Immunotherapy, Vol 90. Advances in Immunology

Description:

For some time immunotherapy has been heralded as a breakthrough approach for cancer treatment. Although the potential of this strategy remains solid, the approach needs considerable refinement. Whilst some programmes are looking to increase the understanding of molecular and cellular mechanisms underlying the stimulation of antitumor immunity, others are trying to find the most appropriate clinical setting that will reveal the role of the immune system in combating cancer. Among the most important discoveries have been tumor-specific antigens.

This thematic volume highlights some key issues and discusses where they may move forward. It has been put together by two leading cancer immunotherapists from two eminent institutions that focus on cancer research.

Contents:

- Engineered cellular vaccines
- Blockade of T cell checkpoints
- Serex in the identification of target antigens
- New approaches to tumor immunotherapy
- Melanoma antigens
- Antibodies and chimeric molecules
- Tumor Immunosurveillance
- Dendritic Cells
- Strategies for Tumor Vaccination
- DNA vaccines

Ordering:

Order Online - http://www.researchandmarkets.com/reports/1757894/

Order by Fax - using the form below

Order by Post - print the order form below and send to

Research and Markets,
Guinness Centre,
Taylors Lane,
Dublin 8,
Ireland.
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit
