Predictive Maintenance of Pumps Using Condition Monitoring

Description: This book shows how condition monitoring can be applied to detect internal degradation in pumps so that appropriate maintenance can be decided upon based on actual condition rather than arbitrary time scales. The book focuses on the main condition monitoring techniques particularly relevant to pumps (vibration analysis, performance analysis). The philosophy of condition monitoring is briefly summarised and field examples show how condition monitoring is applied to detect internal degradation in pumps.

The first book devoted to condition monitoring and predictive maintenance in pumps. Explains how to minimise energy costs, limit overhauls and reduce maintenance expenditure. Includes material not found anywhere else.

Contents: Condition monitoring and its part in maintenance, pump performance and the effect of water, performance analysis and testing of pumps for condition monitoring, performance analysis and its application to optimise time for overhaul, other methods of performance analysis for pump condition monitoring, vibration analysis of pumps basic, vibration analysis of pumps advanced methods, other uses of condition monitoring information, other condition monitoring methods, positive displacement pumps, case studies in condition monitoring of pumps
