Visualize the Concepts and Beyond. Edition No. 1

Description: Throughout the history of computer-aided design, digital tools have been developed in variety to assist a designer during the design process. With the tremendous improvement in computer technology, CAD systems as well enhanced their functions and capabilities for designers to extend their imagination and creativity through different ways. However, most recent commercial software is developed for designers to quickly reproduce their design result, or analyze elements of their developing projects. Designers still spend a great amount of time solving design problems.

In spite of this software development trend, some researchers have been commonly interested in exploring the possibilities of space-planning technology. These researchers have focused on finding the optimized result of space-planning from different aspects of efficiency, methodologies, and considering different kind of data.

To utilize the research of space planning optimization and three dimensional form studies, the author developed a solution that proposing three dimensional architectural forms from optimized space layout or preferential alteration by designers, which is named Space Planning Design Advisor (SPDA) system.
