Dynamic sonography in infant clubfoot. Edition No. 1

Description: Sonography is an imaging tool with many advantages while assessing the immature skeleton. In the last decade the Ponseti method of correcting clubfoot deformity by serial castings has gained terrain. By well-defined ultrasound (US) imaging projections the severity of the foot deformity can be assessed and its treatment monitored dynamically. Sonography can also be used in teaching how to perform the correcting manoeuvres properly. A reproducible US protocol for evaluating congenital clubfoot pathoanatomy, especially the talo-navicular and the calcaneo-cuboid joints, was developed. Normal configurations of the relationships at these joints were obtained by investigating healthy babies. Variations in clubfoot pathoanatomy are described. Morphological changes taking place during early clubfoot treatment, using the Ponseti method, were assessed and compared with a group treated by intensive physiotherapy and plexidur splint. The detailed descriptions of the sonographic protocol and its clinical implications should be useful to paediatric orthopaedic surgeons, physiotherapists, radiologist and other medical professionals treating and assessing clubfeet.

Order by Fax - using the form below

Order by Post - print the order form below and send to

Research and Markets,
Guinness Centre,
Taylors Lane,
Dublin 8,
Ireland.
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit http://www.researchandmarkets.com/contact/

Order Information
Please verify that the product information is correct.

Product Name: Dynamic sonography in infant clubfoot. Edition No. 1
Web Address: http://www.researchandmarkets.com/reports/1904120/
Office Code: SCDKLD9E

Product Format
Please select the product format and quantity you require:

<table>
