HIV prevalence and associated factors among University students: Edition No. 1

Description: Epidemiological studies have shown that the peak incidence of HIV/AIDS occurs in young people aged 15-24 years. Sexual behaviors like early sexual debut, multiple sexual partners, inconsistent use of condom increase the risk of HIV/AIDS among youth. The students in University enjoy the freedom of living outside the guidance of their parents; if this is not managed properly it increases the likelihood to have of risky sexual behavior and HIV infection. It is imperative to monitor HIV among young people in universities for proper and timely action. This research objective was to determine the prevalence of HIV infection among Dire Dawa university students and identify risk factors for HIV sero-positivity. Method: A cross sectional study with internal comparison was conducted among students of Dire Dawa. A self administered questionnaire was used to gather relevant information and blood test was conducted for HIV antibody. The two information were linked anonymously. Qualitative data was collected using Focus group discussion.
