Survey Techniques for Price Indexes. Edition No. 1

Description: Price is a fundamental lever of marketing: the knowledge of prices and their movements can determine the success of a firm. Focusing on the services sector and starting from data collected through a National survey, the prices movements are measured using a price index to synthesize the monthly variation of profit margins. First of all the distribution of survey data and the official statistics about the target population are used to generate a simulated population (the relative efficiencies of different methods of generation are compared). Secondarily, a comparative study of some sampling methods (probability proportional to size and others) is carried on. Then the main imputation methods are also introduced: they are useful to face the challenge of missing data. The analysis is developed taking into account, in particular, the bias of the computed price index. Nevertheless, the studied methodological issues are common to the majority of surveys; thus the conclusions of this work could be useful for practitioners (who have to plan surveys or to use prices data to compute price indexes) to increase the quality of both collected data and price indexes.

Ordering:
Order Online - [http://www.researchandmarkets.com/reports/1915902/](http://www.researchandmarkets.com/reports/1915902/)

Order by Fax - using the form below

Order by Post - print the order form below and send to

Research and Markets,
Guinness Centre,
Taylors Lane,
Dublin 8,
Ireland.
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit http://www.researchandmarkets.com/contact/
