Production of Cut Roses Year Round. Edition No. 1

Description: Finland is today among the globally leading countries in the use of artificial lighting in the year-round production of greenhouse crops. The high energy costs, however, have again made the utilization of a rest period during the darkest winter season topical. As regards the production of cut roses, the year-round cultivation expanded substantially in Finland in the 1990s, and the application of the shoot-bending growing technique has been taken in use widely in Europe. This book focuses, in its first part, on the flower development of roses and the impact of climatic conditions and various growing techniques on this development and certain factors affecting the vase life of the flowers. The second part of the book reports on the results of research concerning the winter cultivation with artificial lights and the effects on the yield of such factors as winter-time rest period and forcing temperature. The shoot-bending growing technique and the effects of different cultivation methods on the vase life of flowers are discussed as well. Finally, a new intensified cultivation technique for roses is presented. This book is intended for use by students, researchers, advisers and growers.
