Freshwater Prawn culture. Edition No. 1

Description: This book was written on the basis of personal experience gained through conducting experiments on developing freshwater prawn culture technology. Bangladesh is principally a carp culture country. In many occasions freshwater prawn is included in the polyculture with carp and this gives an additional income to the farmers. In order to make a sustainable carp-prawn polyculture technology a combination of suitable carp species such as catla, silver carp and a nutrient dense mola along with prawn may be an alternative proposition. A further enhanced production was obtained when only all male prawn juveniles were included in such polyculture. Periodic selective harvesting of large blue-clawed (BC) and orange-clawed (OC) males from all-male culture, and large males and females from mixed culture can enhance the growth of small prawns. After successful completion of the experiment it was found that selective harvesting of male prawns at 15 days interval resulted in higher rate of production and profit. The selective harvesting technique of large individuals of prawns will lead to higher production of freshwater prawn in Bangladesh as well as in other parts of the globe.
