World Energy Outlook 4th Quarter

Description: (Forecast closing date: December 19th 2014)

The Economist Intelligence Unit expects energy demand to increase at a fairly robust average annual rate during the forecast period to 2020, with most growth occurring in developing economies outside the OECD. China, in particular, will continue to provide much of the momentum. As China's requirements for coal, gas and oil steadily increase over the next ten years, so too will its need for greater volumes of fossil fuel imports. It will retain its role as the largest consumer of energy, followed by the US. However, compared with the previous decade, the rate of Chinese energy consumption growth will moderate. Demand for coal in China is likely to slow considerably, with gas and renewables the major beneficiaries. India, meanwhile, will maintain its position as the third-largest consumer of energy, above Russia, Germany and Japan.

Overall, we forecast that total energy consumption will reach 14,682m tonnes of oil equivalent (mtoe), up from 12,813 mtoe in 2014. China's share of global energy consumption will marginally increase during the forecast period, to 24% by 2020 from 23% in 2014, reflecting slower rates of growth than the recent historical norm. In the US, total energy demand will show only incremental growth, reaching 2,368 mtoe in 2020, up only modestly from 2,220 in 2014. In Germany and Japan, energy consumption will be virtually flat throughout the forecast period.

Industry Codes (NAIC): 22
Industry Codes (SIC): 49

Contents:

World Energy Outlook 4th Quarter

World energy outlook
Chinese demand growth to moderate

World energy outlook: Key forecasts

World energy outlook: Oil and gas
Growth will come from outside the OECD
US oil demand growth will be incremental
Energy subsidies may ease
Lower oil prices will test output growth
Americas, Middle East to drive supply
Breakeven price for shale oil varies
Canadian oil sands growth to slow
Brazil pre-salt oil to be tested
Gas demand will grow faster than demand for coal and oil
Strong growth in the Middle East
Unconventionals to drive supply growth
Output to increase from gas exporters

World energy outlook: Coal
Growth in Chinese coal use will slow
Major producers are set to ramp up production

World energy outlook: Electricity
Non-hydro renewables will grow strongly

World energy outlook: Nuclear
Sluggish prospects in Europe and North America
World energy outlook: Alternative energy
