Telecommunication Policy for the Information Age. From Monopoly to Competition

Description: Gerald Brock develops a new theory of decentralized public decisionmaking and uses it to clarify the dramatic changes that have transformed the telecommunication industry from a heavily regulated monopoly to a set of market-oriented firms. He demonstrates how the decentralized decisionmaking process—whose apparent element of chaos has so often invited criticism—has actually made the United States a world leader in reforming telecommunication policy.

Contents:
- Introduction
- Positive Results of the Decentralized Process
- Potential Benefits of a Decentralized Policy Process
