Non-standard Antennas

Description: This book aims at describing the wide variety of new technologies and concepts of non-standard antenna systems—reconfigurable, integrated, terahertz, deformable, ultra-wideband, using metamaterials, or MEMS, etc., and how they open the way to a wide range of applications, from personal security and communications to multifunction radars and towed sonars, or satellite navigation systems, with space-time diversity on transmit and receive. A reference book for designers in this lively scientific community linking antenna experts and signal processing engineers.
