Rapid and Virtual Prototyping and Applications

Description: Drawing from cutting edge research this interesting text is a comprehensive insight into the very latest developments in advanced manufacturing technologies. The papers, which are from a conference organised by Lancaster University have been reviewed by a panel of recognized academic experts from a number of universities.

CONTENTS INCLUDE

- Design and manufacture of drilling guides for osseointegrated implants using rapid prototyping techniques
- A study of build accuracy of the Z-corps three-dimensional printing technique and related seepage control
- Rapid tools for injection moulding
- Direct laser sintering of ceramics
- Fabrication of EDM electrodes using rapid prototyping techniques
- CNC as a rapid prototyping method – a company perspective
- The useful application of rapid technologies especially for automotive development
- Virtual prototyping brings revolution to a small engineering business

Rapid and virtual prototyping are fundamental tools in the design, development and manufacturing of a divergence of products. This important volume is vital reading for anyone interested in keeping up-to-date with the developments in this key area of manufacturing. It is also enlightening reading for researchers and new users of these technologies.
