Parasitic Helminths. Targets, Screens, Drugs and Vaccines. Drug Discovery in Infectious Diseases

Description: This third volume in the successful 'Drug Discovery in Infectious Diseases' series is the first to deal with drug discovery in helminthic infections in human and animals. The result is a broad overview of different drug target evaluation methods, including specific examples of successful drug development against helminthes, and with a whole section devoted to vaccine development.

With its well-balanced mix of high-profile contributors from academia and industry, this handbook and reference will appeal to a wide audience, including parasitologists, pharmaceutical industry, epidemiologists, and veterinary scientists.
