Fish Disease. Diagnosis and Treatment. 2nd Edition

Description: Fish Disease: Diagnosis and Treatment, Second Edition provides thorough, yet concise, descriptions of viral, bacterial, fungal, parasitic, and noninfectious diseases in an exhaustive number of fish species. Now in full color with more than 500 images, the book is designed as a comprehensive guide to the identification and treatment of both common and rare problems encountered during the clinical work-up of fish species.

Diseases are discussed following a systems-based approach, to ensure a user-friendly and practical manual for identifying problems.

Fish Disease: Diagnosis and Treatment, Second Edition is the must-have reference for any aquaculturists, aquatic biologists, or fish health specialists dealing with diagnosing or treating fish diseases.

New to this Edition:
- Offers an expanded clinical work-up section to include recently developed, as well as more specialized, diagnostic procedures
- Expands coverage of molecular methods for fish pathogen identification
- Provides coverage of many newly prominent and recently discovered diseases
- Expands the Pharmacopoeia section with both new drugs and dosing regimens
- Incorporates greater discussion of diseases and treatments as they relate to environmental and public health
- Provides updates on other health protection strategies, including commercially available diagnostic tests and vaccines
- Expands coverage of the principles and practice of biosecurity

Contents:

Acknowledgments.

How to Use the Book.

PART I METHODS FOR DIAGNOSING FISH DISEASES.

1. Major Cultured Species.
   Aquarium (Pet) Fish.
   Bait Fish.
   Food Fish.
   Laboratory Fish.

2. Types of Culture Systems.
   Closed Culture Systems: Aquaria.
   Closed Culture Systems: Ponds.
   Flow-Through Culture Systems.
   Semi-Open Culture Systems.

3. The Clinical Workup.
   Equipping a Fish Disease Diagnostic Facility.
   Case Submissions.
   Water-Quality Analysis.
   Taking the History.
   The Physical Exam.
   Clinical Techniques: Routine Methods.
   Clinical Techniques: Specialized Methods.
4. Postmortem Techniques.
- Euthanasia.
- Preserving Parasites.
- Culturing for Bacteria.
- Sampling for Water Molds and Fungi.
- Sampling for Viruses.
- Examining Tissues Postmortem.
- Zoonotic Diseases and Other Human Pathogens.

5. Guidelines for Interpreting Clinical Findings.
- Environment, Stress, and Fish Disease.
- Acclimation.
- How to Use Part II, the Problem List.
- Sample Problem Data Sheet.
- Clinical Decision Making: Have the Major Problems Been Identified?
- Prioritizing Problems.
- Treatment Plans.
- When to Refer Cases.

- Biosecurity.
- Health Promotion and Maintenance.
- Animal Welfare.
- Food Safety.
- Environmental Safety.

PART II PROBLEM LIST.

7. PROBLEMS 1 through 10: Diagnoses made with commercially available water-quality test kits or equipment that should be present in the clinician's clinic.
- Environmental hypoxia.
- Temperature stress.
- Temperature stratification.
- Ammonia poisoning.
- Nitrite poisoning.
- Nitrate poisoning.
- Too low (too acidic) pH.
- Too high (too alkaline) pH.
- Improper hardness.
- Improper salinity.

8. PROBLEMS 11 through 43: Diagnoses made by either gross external examination of fish, wet mounts of skin/gills, or histopathology of skin/gills.
- Gas supersaturation.
- Lamprey infestation.
- Leech infestation.
- Copepod infestation/infection.
- Branchiuran infestation.
- Isopod infestation.
- Monogenean infestation.
- Turbellarian infection.
- Protozoan ectoparasites: general features.
- Ich infection.
- Marine white spot disease.
- Trichodinosis.
- Chilodonella infestation.
- Brookynella infestation.
- Tetrahymenosis.
- Scuticociliatosis.
- Marine velvet disease.
- Freshwater velvet disease.
- Ichthyobodoisis.
30. Gill Cryptobia infestation.
32. Sessile, solitary, ectocommensal ciliate infestation.
33. Sessile, colonial, ectocommensal ciliate infestation.
34. Typical water mold infection.
35. Epizootic ulcerative syndrome.
36. Branchiomyosporosis.
37. Columnaris infection.
38. Bacterial cold water disease.
39. Bacterial gill disease.
40. Lymphocystis.
41. Epitheliocystis.
42. Miscellaneous skin and gill diseases.
43. Incidental findings.

9. PROBLEM 44: Diagnoses made by examination of a gill clip or a blood smear.
44. Primary hemopathies.

10. PROBLEMS 45 through 57: Diagnoses made by bacterial culture of the kidney or affected organs.
45. Bacterial dermatopathies/systemic bacterial infections: general features.
46. Motile aeromonad infection.
47. Aeromonas salmonicida infection.
48. Enteric septicemia of catfish.
49. Edwardsiella tarda infection.
50. Vibriosis.
51. Pasteurellosis.
52. Enteric redmouth disease.
53. Streptococcosis.
54. Bacterial kidney disease.
55. Mycobacteriosis.
56. Piscirickettsiosis.
57. Miscellaneous systemic bacterial infections.

11. PROBLEMS 58 through 76: Diagnoses made by necropsy of the viscera and examination of wet mounts or histopathology of internal organs.
58. Digenean trematode infection: general features.
59. Digenean gill infection.
60. Nematode infection.
61. Cestode infection.
62. Acanthocephalan infection.
63. Myxozoan infection: general features.
64. Proliferative gill disease.
65. Ceratomyxa shasta infection.
66. Hoferellus carassii infection.
67. Proliferative kidney disease.
68. Whirling disease.
69. Miscellaneous important myxozoan infections.
70. Microsporidian infection.
71. Ichthyophthiriosis.
72. True fungal infections.
73. Diplomonad fl agellate infection.
74. Tissue coccidiosis.
75. Miscellaneous endoparasitic infections.
76. Idiopathic epidermal proliferation/neoplasia.

12. PROBLEMS 77 through 88: Rule-out diagnoses 1 (viral infections): Presumptive diagnosis is based on the absence of other etiologies combined with a diagnostically appropriate history, clinical signs, and/or pathology. Definitive diagnosis is based on presumptive diagnosis combined with confirmation of viral presence (e.g., antibody probe, gene probe).
77. Systemic viral diseases: general features.
78. Channel catfish virus disease.
79. Infectious pancreatic necrosis and other aquatic birnaviruses.
80. Infectious hematopoietic necrosis.
81. Viral hemorrhagic septicemia.
82. Infectious salmon anemia.
83. Spring viremia of carp.
84. Iridoviral diseases.
85. Nodaviral diseases.
86. Koi herpesvirus disease.
87. Alphavirus diseases.
88. Miscellaneous systemic viral diseases and infections.

13. PROBLEMS 89 through 99: Rule–out diagnoses 2: Presumptive diagnosis is based on the absence of other etiologies combined with a diagnostically appropriate history, clinical signs, and/or pathology. Definitive diagnosis is based on presumptive evidence combined with further, more extensive workup with a specific identification of the problem.
89. Nutritional deficiency.
90. Hypercarbia.
91. Hydrogen sulfide poisoning.
92. Chlorine/chloramine poisoning.
93. Metal poisoning.
94. Cyanide poisoning.
95. Miscellaneous water-borne poisonings.
96. Harmful algal blooms.
98. Traumatic lesions.

14. PROBLEMS 100 through 102: Rule–out diagnoses 3: Presumptive diagnosis is based on the absence of other etiologies combined with a diagnostically appropriate history, clinical signs, and/or pathology. Definitive diagnosis is not possible since the etiology is unknown (idiopathic).
100. Lateral line depigmentation.
101. Senescence.
102. Miscellaneous important idiopathic diseases.

15. PROBLEM 103: Diagnoses made by examination of eggs.
103. Egg diseases.

PART III METHODS FOR TREATING FISH DISEASES.

   Treatment Guidelines.
   Routes of Drug Administration.
   Recommended Treatments in Various Culture Systems.
   Which Dosage to Use.

17. Pharmacopoeia.
   Acetic Acid.
   Acriflavin.
   Activated Carbon.
   Agricultural Lime.
   Alum.
   Anesthetics.
   Antibiotics.
   Amoxicillin Trihydrate.
   Ampicillin Sodium.
   Chloramphenicol.
   Enrofloxacin.
   Erythromycin.
   Florfenicol.
   Flumequine.
   Furaltadone.
   Furazolidone.
   Kanamycin Sulfate.
   Nalidixic Acid.
   Neomycin Sulfate.
Nifurpirinol.
Nitrofurazone.
Oxolinic Acid.
Oxytetracycline.
Sarafl oxacin.
Sulfadiazine–Trimethoprim.
Sulfadimethoxine–Ormetoprim.
Sulfadimidine–Trimethoprim.
Sulfamerazine.
Sulfamethoxazole–Trimethoprim.
Antiseptics.
Bayluscide.
Benzocaine.
Biological Control.
Bithionol.
Bronopol.
Buffers: Freshwater Aquaria.
Buffers: Marine Aquaria.
Buffers: Ponds.
Butorphanol.
Calcium.
Carbon Dioxide.
Chloramine Neutralizer.
Chloramine–T.
Chlorhexidine.
Chloride.
Chlorine.
Chlorine Neutralizer.
Chloroquine Diphosphate.
Chorionic Gonadotropin.
Clove Oil.
Copper.
Chelated Copper.
Copper Sulfate.
Deionized Water.
Difl ubenzuron.
Dimetridazole.
Diquat.
Disinfection.
Electroshock.
Enamectin Benzoate.
Eugenol.
Euthanasia.
Fenbendazole.
Flubendazole.
Formalin.
Formalin/Malachite Green.
Freshwater.
Fumagillin.
Gonadotropin Releasing Hormone.
Hydrogen Peroxide.
Hyposalinity.
Hypothermia.
Immunostimulants.
Ivermectin.
Ketamine.
Ketoprofen.
Levamisole Hydrochloride.
Lidocaine.
Magnesium Sulfate.
Malachite Green.
Mebendazole.
Methylene Blue.
Methyltestosterone.
Metomidate.
Metronidazole.
Monensin Sodium.
Nitrifying Bacteria.
Organophosphate.
Ozone.
Peat.
2-Phenoxyethanol.
Piperazine Sulfate.
Potassium Permanganate.
Povidone Iodine.
Praziquantel.
Pyrethroid.
Quaternary Ammonium Compounds.
Quinaidine Sulfate.
Salt.
Secnidazole.
Sedatives.
Silver Sulfadiazine.
Slaked Lime.
Sodium Bicarbonate.
Sodium Pentobarbital.
Sodium Phosphate.
Sodium Sulfite.
Teflubenzuron.
TFM.
Toltrazuril.
Tonic Immobility.
Tricaine.
Triclabendazole.
Ultraviolet Light.
Unslaked Lime.
Vaccines.
Virkon Aquatic.
Water Change.
Wound Sealant.
Zeolite.
