Blackwell's Five-Minute Veterinary Consult: Small Mammal. 2nd Edition

Description: Blackwell's Five–Minute Veterinary Consult: Small Mammal brings together a wide range of information on diseases commonly seen in small exotic mammals into a single, accessible resource. With consistency and broad coverage unparalleled by other texts, this new edition adds sections on chinchillas, guinea pigs, and rodents to the existing rabbit and ferret topics to offer complete coverage of these popular, yet less commonly treated, species. Detailed, up-to-date information on the diagnosis and treatment options for all disorders commonly encountered in exotic companion animals is readily accessible, making this a go-to reference for any veterinarian seeing small exotic mammals, regardless of their experience level with these species.

Divided into sections by species, topics are organized alphabetically, with a standardized layout that makes it easy to find information. The Second Edition includes online access to customizable Client Education Handouts, which can be downloaded and used in the veterinary clinic. This book is an essential purchase for general practitioners treating exotic companion animals, exotic animal veterinarians, and veterinary students.
