Readings in Industrial Organization. Wiley Blackwell Readings for Contemporary Economics

Description: In Readings in Industrial Organization, Luis Cabral has assembled and placed into context the most important contributions to the literature of industrial organizations (IO) since the 1980s. For students, this collection rises above and beyond a coursepack; for researchers, it is an essential reference. The readings also provide a useful point of entry to IO literature for economists for whom IO is not the main field of research. These readings cover core areas of IO and reflect the mostly theoretical nature of the latest work in the field:

- Static Oligopoly Theory
- Entry
- Repeated Games and Oligopoly Theory
- Technology and Dynamics
- Product Differentiation
- Asymmetric Information
- Empirical Analysis of Oligopoly.
