Deploying IPv6 in 3GPP Networks. Evolving Mobile Broadband from 2G to LTE and Beyond. NSN/Nokia Series

Description:
Deploying IPv6 in 3GPP Networks – Evolving Mobile Broadband from 2G to LTE and Beyond

A practical guide enabling mobile operators to deploy IPv6 with confidence

The most widely used cellular mobile broadband network technology is based on the 3GPP standards. The history and background of the 3GPP technology is in the Global Mobile Service (GSM) technology and the work done in European Telecommunications Standards Institute (ETSI). This primary voice service network has evolved to be the dominant mobile Internet access technology.

Deploying IPv6 in 3GPP Networks covers how Internet Protocol version 6 (IPv6) is currently defined in the industry standards for cellular mobile broadband, why and how this route was taken in the technology, and what is the current reality of the deployment. Furthermore, it offers the authors' views on how some possible IPv6 related advances 3GPP networks may be improved during the coming years. It gives guidance how to implement and deploy IPv6 correctly in the Third Generation Partnership Project (3GPP) mobile broadband environment, and what issues one may face when doing so. The book covers 3GPP technologies from 2G to LTE, and offers some ideas for the future.

Key features
- written by highly respected and experienced authors from the IPv6 / mobile world
- Provides an explanation of the technical background for some not-so-obvious design choices, what to concentrate on, and what transition strategies should be used by the vendors and the operators
- Offers a useful reference guide for operators and vendors entering into IPv6 business

Contents:
Foreword xvii
Preface xix
Acknowledgments xxi
Acronyms xxiii
Glossary xxxiii
1 Introduction 1
1.1 Introduction to Internet and the Internet Protocol 2
1.2 Internet Principles 2
1.3 The Internet Protocol 4
1.3.1 Networks of Networks 6
1.3.2 Routing and Forwarding 7
1.4 Internet Protocol Addresses 9
1.4.1 IPv4 Addresses 9
1.4.2 IPv6 Addresses 11
1.5 Transport Protocols 12
1.5.1 User Datagram Protocol 13
1.5.2 Transmission Control Protocol 13
1.5.3 Port Numbers and Services 14
1.6 Domain Name Service 14
1.6.1 DNS Structure 14
1.6.2 DNS Operation 15
1.6.3 Top Level Domain 16
1.6.4 Internationalized Domain Names 17
1.7 IPv4 Address Exhaustion 17
1.7.1 IP Address Allocation 18
1.7.2 History of IPv4 Address Exhaustion 19
1.8 IPv6 History Thus Far 21
1.8.1 IPv6 Technology Maturity 21
1.8.2 IPv6 Network Deployments 22
1.9 Ongoing Cellular Deployments 23
1.10 Chapter Summary 24
1.11 Suggested Reading 24

References 24

2 Basics of the 3GPP Technologies 27
2.1 Standardization and Specifications 27
2.1.1 3GPP Standardization Process 28
2.1.2 IETF Standardization Process 31
2.1.3 Other Important Organizations in the 3GPP-Ecosystem 33
2.2 Introduction to 3GPP Network Architecture and Protocols 34
2.2.1 GSM System 34
2.2.2 General Packet Radio Service 36
2.2.3 Evolved Packet System 41
2.2.4 Control and User Planes, and Transport and User Layer Separation 44
2.3 3GPP Protocols 45
2.3.1 Control-Plane Protocols 46
2.3.2 User-Plane Protocols 53
3.1.5 IPv6 Addresses on Network Interfaces 82
3.1.6 Interface Identifier and the Modified EUI-64 83
3.1.7 IPv6 Address Space Allocations 84
3.1.8 Special IPv6 Address Formats 84
3.1.9 Textual Presentations of IPv6 Addresses 86
3.2 IPv6 Packet Header Structure and Extensibility 87
3.2.1 Traffic Class and Flow Label 88
3.2.2 IPv6 Extension Headers 90
3.2.3 MTU and Fragmentation 92
3.2.4 Multicast 94
3.3 Internet Control Message Protocol Version 6 97
3.3.1 Error Messages 98
3.3.2 Informational Messages 100
3.4 Neighbor Discovery Protocol 101
3.4.1 Router Discovery 101
3.4.2 Parameter Discovery 102
3.4.3 On-link Determination 104
3.4.4 Link-layer Address Resolution 104
3.4.5 Neighbor Unreachability Detection 105
3.4.6 Next-hop Determination 106
3.4.7 Duplicate Address Detection 106
3.4.8 Redirect 107
3.4.9 Secure Neighbor Discovery 107
3.4.10 Neighbor Discovery Proxies 108
3.5 Address Configuration and Selection Approaches 109
3.5.1 Stateless Address Autoconfiguration 110
3.5.2 Dynamic Host Configuration Protocol Version 6 112
3.5.3 IKEv2 117
3.5.4 Address Selection 118
3.5.5 Privacy and Cryptographically Generated Addresses 120
3.5.6 Router Selection 121
5.3.1 Transition Solutions Not Included 256
5.3.2 Dual-stack 257
5.3.3 NAT64 and DNS64 258
5.3.4 464XLAT 269
5.3.5 Bump-In-the-Host 271
5.3.6 Mapping Address and Port Number 272
5.3.7 Other Tunneling or Translation Based Transition Mechanisms 275
5.4 Transition Scenarios for 3GPP 277
5.4.1 Transition Scenario Evolution 278
5.4.2 Dual-stack 280
5.4.3 IPv6-only 281
5.4.4 Double Translation 281
5.5 Transition Impacts on 3GPP Architecture 282
5.5.1 Transition Impact on the Supporting Infrastructure 282
5.5.2 IP Network Support Systems 283
5.5.3 Tools to Divide Subscribers Per IP Capability 285
5.5.4 Translation Implications 286
5.5.5 Transition Support in the Transport Plane 287
5.5.6 Roaming 287
5.5.7 Impact of Delayed Transition to IPv6 288
5.6 Transitioning to IPv6 289
5.6.1 Application Developer's Transition Plan 290
5.6.2 Phone Vendor's Transition Plan 290
5.6.3 Network Operator's Transition Checklist 290
5.7 Chapter Summary 292

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:
Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: Please transfer funds to:
Account number 833 130 83
Sort code 98-53-30
Swift code ULSBIE2D
IBAN number IE78ULSB9853308331083
Bank Address Ulster Bank,
27-35 Main Street,
Blackrock,
Co. Dublin,
Ireland.
