Adaptive Filters. Theory and Applications. 2nd Edition

Description: This second edition of Adaptive Filters: Theory and Applications has been updated throughout to reflect the latest developments in this field; notably an increased coverage given to the practical applications of the theory to illustrate the much broader range of adaptive filters applications developed in recent years. The book offers an easy to understand approach to the theory and application of adaptive filters by clearly illustrating how the theory explained in the early chapters of the book is modified for the various applications discussed in detail in later chapters. This integrated approach makes the book a valuable resource for graduate students; and the inclusion of more advanced applications including antenna arrays and wireless communications makes it a suitable technical reference for engineers, practitioners and researchers.

Key features:

- Offers a thorough treatment of the theory of adaptive signal processing; incorporating new material on transform domain, frequency domain, subband adaptive filters, acoustic echo cancellation and active noise control.

- Provides an in-depth study of applications which now includes extensive coverage of OFDM, MIMO and smart antennas.

- Contains exercises and computer simulation problems at the end of each chapter.

- Includes a new companion website hosting MATLAB® simulation programs which complement the theoretical analyses, enabling the reader to gain an in-depth understanding of the behaviours and properties of the various adaptive algorithms.

Contents:

Preface xvii
Acknowledgments xxi
1 Introduction 1
1.1 Linear Filters 1
1.2 Adaptive Filters 2
1.3 Adaptive Filter Structures 3
1.4 Adaptation Approaches 7
1.5 Real and Complex Forms of Adaptive Filters 9
1.6 Applications 9
2 Discrete-Time Signals and Systems 28
2.1 Sequences and z-Transform 28
2.2 Parseval's Relation 32
2.3 System Function 33
2.4 Stochastic Processes 35
Problems 44
3 Wiener Filters 48
3.1 Mean-Squared Error Criterion 48
3.2 Wiener Filter – Transversal, Real-Valued Case 50
3.3 Principle of Orthogonality 55
3.4 Normalized Performance Function 57
3.5 Extension to Complex-Valued Case 58
3.6 Unconstrained Wiener Filters 61
3.7 Summary and Discussion 79
Problems 80

4 Eigenanalysis and Performance Surface 90
4.1 Eigenvalues and Eigenvectors 90
4.2 Properties of Eigenvalues and Eigenvectors 91
4.3 Performance Surface 104
Problems 112

5 Search Methods 119
5.1 Method of Steepest Descent 120
5.2 Learning Curve 126
5.3 Effect of Eigenvalue Spread 130
5.4 Newton's Method 131
5.5 An Alternative Interpretation of Newton's Algorithm 133
Problems 135

6 LMS Algorithm 139
6.1 Derivation of LMS Algorithm 139
6.2 Average Tap-Weight Behavior of the LMS Algorithm 141
6.3 MSE Behavior of the LMS Algorithm 144
6.4 Computer Simulations 156
6.5 Simplified LMS Algorithms 167
6.6 Normalized LMS Algorithm 170
6.7 Affine Projection LMS Algorithm 173
6.8 Variable Step-Size LMS Algorithm 177
6.9 LMS Algorithm for Complex-Valued Signals 179
Algorithm 549
16 Active Noise Control 551
16.1 Broadband Feedforward Single-Channel ANC 553
16.2 Narrowband Feedforward Single-Channel ANC 559
16.3 Feedback Single-Channel ANC 573
16.4 Multichannel ANC Systems 577
Appendix 16A: Derivation of Eq. (16.46) 582
Appendix 16B: Derivation of Eq. (16.53) 583
17 Synchronization and Equalization in Data Transmission Systems 584
17.1 Continuous Time Channel Model 585
17.2 Discrete Time Channel Model and Equalizer Structures 589
17.3 Timing Recovery 593
17.4 Equalizers Design and Performance Analysis 606
17.5 Adaptation Algorithms 617
17.6 Cyclic Equalization 618
17.7 Joint Timing Recovery, Carrier Recovery, and Channel Equalization 628
17.8 Maximum Likelihood Detection 629
17.9 Soft Equalization 631
17.10 Single-Input Multiple-Output Equalization 643
17.11 Frequency Domain Equalization 645
17.12 Blind Equalization 649
Problems 654
18 Sensor Array Processing 659
18.1 Narrowband Sensor Arrays 660
18.2 Broadband Sensor Arrays 678
18.3 Robust Beamforming 683
Problems 692
19 Code Division Multiple Access Systems 695
19.1 CDMA Signal Model 695
19.2 Linear Detectors 699
19.3 Adaptation Methods 707
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit http://www.researchandmarkets.com/contact/

Order Information
Please verify that the product information is correct.

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:

Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: Please transfer funds to:

<table>
