Bladder Cancer Drug Pathway Analyzer

**Description:**
Extra value: One year of free online updates included with this product

There are today at least 141 targeted molecular therapies known to affect more than 219 specific intracellular signaling pathways for the treatment of bladder cancer. The rational for this plethora of treatment strategies is based on our increasing understanding of the 133 drug targets that are included in this drug-pathway analyzing tool. No less than 123 of these have been recorded with mutations and 30 drug targets have mutations which have been causally implicated in cancer.

**Pathway Coverage**
- BioCarta #193 Pathways
- KEGG #161 Pathways
- NCI-Nature #219 Pathways
- NetPath #32 Pathways

**Pipeline Coverage**
Marketed #12
Pre-registration #2
Phase III #8
Phase II #54
Phase I #31
Preclinical #35
Discovery #1
No Data #1
Suspended #3
Ceased #41

The continuous identification of drug targets and pathways that are altered in cancer is not only crucial for our understanding of cancer biology, but also to search for new targets for early diagnosis and improved treatment designs. Consequently, it has never before been as important to rapidly translate systems biology of disease and therapeutics to actionable pipeline decisions to ensure that the optimal market conditions exist by the time a candidate drug is commercialized.

For this reason BioSeeker, a leader in pipeline analytics, has constructed this high-level drug-pathway analyzer which lets you interact with the bladder cancer pipeline in a whole different than way than you ever done before. Its capabilities moves you beyond powerful competitive intelligence to an opportunity seeking tool which lets you, by means of both present and emerging scientific knowledge, analyze the bladder cancer pipeline for interesting compounds which affect and/or fit your purposes, may it be benchmarking, in/out-licensing, combination therapy options, drug repositioning, indication expansion etc.

You Use this Analyzer Tool in Bladder Cancer to:
- Map the competition and find suitable benchmarking/licensing drugs based on specific pathways and drug properties
- Uncover potential indication expansion areas for your drug portfolio
- Reveal repositioning opportunities for your older, shelved drugs
- Evaluate the progression and success of targeting certain pathways by different tumor types
- Investigate drugs which affect crosstalk between key pathways
- Investigate different combination therapy options available to you in various cancer types. Use this tool to look for the most-efficient ways to combine your drug with other targeted agents.
- Find possible adjuvant therapy settings with other drugs.
This is how you do it:
In analyzing drug-pathway relationships this tool has three core modes:

1. Select - You go right ahead and select any pathway for analysis
2. Suggest - The tool can suggest pathways to you according to your pipeline specifications
3. Compare - You can overlay any pathways with each other and do a comparative analysis

You can interactively analyze any bladder cancer drug-pathway relationship by using up to four different pathway sources and further refine your analysis with up to 20 different pipeline parameters, including parameters such as presence of mutations, molecular function of targets, stage of development, sub-cellular localization and many more. Each parameter has multi-select options to them and can be used as either an inclusion parameter or exclusion parameter.

User Reports with Graphics
Each analysis report generated in the Drug Pathway Analyzer includes many different types of graphs and tables which can also be easily downloaded and dropped into applications such as PowerPoint for external presentations outside the tool.

The Pathway Analyzer Comes Integrated with Pipeline Information
With a simple click you can easily and quickly get relevant information about the drug being included in a specific pathway. A typical drug profile reports on, depending on stage of development and available information:

- **Drug Name & Synonyms**
  Presentation of drug name and synonyms

- **Principal Company & Partners**
  Presentation of principal company and partners

- **Target and Molecular Function of Target**
  Described target(s) is/are presented with:
  - Official Gene Symbol – Chromosome Location – Gene & Protein Name – Molecular Function

- **Target Localization**
  Described target(s) is/are presented with primary and alternate localizations.

- **Target Expression Profiles**
  Links to protein expression profile(s) of target(s) in various human tissues, cell lines and primary cells, including up to:
  - 48 different normal tissue types
  - 20 different types of cancer
  - 47 cell lines
  - 12 samples of primary blood cells

- **Mutation**
  All targets are cross-referenced with the Catalogue of Somatic Mutations in Cancer (COSMIC). It is designed to store and display somatic mutation information and related details and contains information relating to human cancers.

- **Biological Structures**
  The identity of available biological structures on drug targets was retrieved from the RCSB Protein Databank for you to easily review what available structures of drug targets exist.

- **Targeted Pathways**
  Described target(s) is/are matched for the involvement in cellular pathways according to BioCarta, KEGG, NCI -Nature and NetPath.

- **Mechanism**
  Drug mechanism of action

- **Developmental Projects**
Summary field of developmental projects for the drug, including indication, developmental stage and status.

Example:
- Cancer, myeloma – Phase II Clinical Trial – Active
- Cancer, prostate – Phase III Clinical Trial – Ceased

Drug BioSeeker Group's software

Short introduction to drug

Compound Data
Compound type, Chemical name, CAS Number and molecular weight

Patent Data
Available patent information related to the drug is presented here.

Fillings and Approvals
- Approvals and submissions
- Analyst comments

Deals & Licensing
Collaborations and deals
Availability for licensing

Phase IV Data
Available Phase IV development data, developmental history and scientific data.

Phase III Data
Available Phase III development data, developmental history and scientific data.

Phase II Data
Available Phase II development data, developmental history and scientific data.

Phase I Data
Available Phase I development data, developmental history and scientific data.

Phase 0 Data
Available Phase 0 development data, developmental history and scientific data.

Preclinical Data
Available preclinical development data, developmental history and scientific data.

Discovery Data
Available discovery development data, developmental history and scientific data.

System Requirements
- Operating system: Windows (2000/XP/Vista/7/8) and Mac Users are offered Online Access Only
- Browser Application (Internet Explorer)
- Internet access (to access related internet resources)

Ordering:

Order Online - [http://www.researchandmarkets.com/reports/2673677/](http://www.researchandmarkets.com/reports/2673677/)

Order by Fax - using the form below

Order by Post - print the order form below and send to

Research and Markets,
Guinness Centre,
Taylors Lane,
Dublin 8,
Ireland.
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit
