Phase Transformations in Steels. Woodhead Publishing Series in Metals and Surface Engineering

Description: The processing-microstructure-property relationships in steels continue to present challenges to researchers because of the complexity of phase transformation reactions and the wide spectrum of microstructures and properties achievable. This major two-volume work summarises the current state of research on phase transformations in steels and its implications for the emergence of new steels with enhanced engineering properties.

Volume 1 reviews fundamentals and diffusion-controlled phase transformations. After a historical overview, chapters in part one discuss fundamental principles of thermodynamics, diffusion and kinetics as well as phase boundary interfaces. Chapters in part two go on to consider ferrite formation, proeutectoid ferrite and cementite transformations, pearlite formation and massive austenite-ferrite phase transformations. Part three discusses the mechanisms of bainite transformations, including carbide-containing and carbide-free bainite. The final part of the book considers additional driving forces for transformation including nucleation and growth during austenite-to-ferrite phase transformations, dynamic strain-induced ferrite transformations (DIST) as well as the effects of magnetic fields and heating rates.

With its distinguished editors and distinguished international team of contributors, the two volumes of Phase transformations in steels is a standard reference for all those researching the properties of steel and developing new steels in such areas as automotive engineering, oil and gas and energy production.

- Discusses the fundamental principles of thermodynamics, diffusion and kinetics
- Considers various transformations, including ferrite formation, proeutectoid ferrite and cementite transformations
- Considers additional driving forces for transformation including nucleation and growth during austenite-to-ferrite phase transformations

Contents: Part 1 Fundamentals of phase transformations: The historical development of phase transformations understanding in ferrous alloys
Thermodynamics of phase transformations in steels
Fundamentals of diffusion in phase transformations in steels
Kinetics of phase transformations in steels
Structure, energy and migration of phase boundaries in steels. Part 2 Diffusion-controlled transformations: Fundamentals of ferrite formation in steels
Proeutectoid ferrite and cementite transformations in steels
The formation of pearlite in steels
Carbide-containing bainite transformation in steels
Carbide-free bainite transformation in steels
Kinetics of bainite transformation in steels. Part 4 Additional driving forces for transformations: Nucleation and growth during the austenite-to-ferrite phase transformation in steels after plastic deformation
Dynamic strain-induced ferrite transformation (DIST) in steels
The effect of a magnetic field on phase transformations in steels
The effect of heating rate on phase transformations in steels and Fe-Ni-Based alloys.

Payment Information
Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:
Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: Please transfer funds to:
Account number: 833 130 83
Sort code: 98-53-30
Swift code: ULSBIE2D
IBAN number: IE78ULSB98533083313083
Bank Address: Ulster Bank,
27-35 Main Street,
Blackrock,
Co. Dublin,
Ireland.
