Cervical Cancer Test Market & Patients - Pap Smear, HPV DNA, VIA - Test & Patients - Worldwide

Description:
Cervical cancer is one of the deadliest cancers among women all over the world. However in the past few decades, mortality from cervical cancer has significantly decreased in developed countries due to widely use of Pap smear test. HPV DNA and VIA test are other popular tests used across the world. VIA test is most adoptable test in developing countries as it is cheaper in comparison to Pap smear test and HPV DNA test.

Cervical cancer test market is dominated by United States in 2013. Germany and United Kingdom are other top two leaders in this market place. In Asian region, China and India are top two countries having largest cervical cancer test population. Few countries have also shown a decline in cervical cancer test market. However VIA test market accounts for largest share in cervical cancer test market in the case of developing countries like India and China.

A high prevalence of HPV-infected patients across the globe, rising incidences of teenage sexual cases, a rising number of organized cervical cancer programs initiated by governments and NGOs and introduction of low cost VIA test are some of the major growth drivers for the cervical cancer test market. However, lack of insufficient healthcare infrastructure and lack of cervical cancer screening awareness are the major hinder for cervical testing market.
