COPD Drug Market Opportunity & Clinical Pipeline Analysis

Description: Close to 1 Billion people worldwide suffer from respiratory or pulmonary diseases. In the respiratory therapeutic domain, Asthma and COPD are the major categories, accounting for close to 75% of the total patient for respiratory or pulmonary diseases. Chronic obstructive pulmonary disease (COPD) is a disease which progresses in the lungs and requires treatment all through the life. It is an inflammatory disorder which is characterized by obstruction in the variable airflow and airway hyper-responsiveness to many intrinsic, genetic and environmental stimuli. These disorders have become one of the major reasons for disability and death.

The prevalence and incidence of this disease is increasing worldwide. Bronchodilators and polypharmacy dominates the treatment for this disease. It is expected that by 2020, COPD would account for more than 6 Million deaths across the globe annually. In spite of significant investments in the development of novel agents to treat the disease, the COPD therapy area is generally dominated by inhaled bronchodilator therapies which only relieve symptoms, but do not completely cure the disease.

There exist many opportunities for a disease-modifying therapy. However, the development of new COPD therapies is increasingly focusing on therapies which combine two bronchodilators into one inhaler. There has been significant expansion in the COPD drug market in the recent years and it is expected that this market would record high growth over the next decade. The major driving force in the future would be a greater demand for new drugs with higher and better efficiency.

This market has been recognized to be one with many opportunities which are yet to be tapped. Hence, the leading pharma companies are increasing their focus on this segment by introducing new combination drugs and novel agents. The global market for COPD has been estimated to be close to US$ 12 billion in 2013. With a high number of new and more efficient and convenient drugs crowding the market, it is expected that this market would grow at a CAGR of 8% to reach close to US$ 17.5 billion by 2018.
