Sonochemistry and the Acoustic Bubble

Description: Sonochemistry and the Acoustic Bubble provides an introduction to the way ultrasound acts on bubbles in a liquid to cause bubbles to collapse violently, leading to localized 'hot spots' in the liquid with temperatures of 5000° celcius and under pressures of several hundred atmospheres.

These extreme conditions produce events such as the emission of light, sonoluminescence, with a lifetime of less than a nanosecond, and free radicals that can initiate a host of varied chemical reactions (sonochemistry) in the liquid, all at room temperature.

The physics and chemistry behind the phenomena are simply, but comprehensively presented. In addition, potential industrial and medical applications of acoustic cavitation and its chemical effects are described and reviewed.

The book is suitable for graduate students working with ultrasound, and for potential chemists and chemical engineers wanting to understand the basics of how ultrasound acts in a liquid to cause chemical and physical effects.

- Experimental methods on acoustic cavitation and sonochemistry
- Helps users understand how to readily begin experiments in the field
- Provides an understanding of the physics behind the phenomenon
- Contains examples of (possible) industrial applications in chemical engineering and environmental technologies
- Presents the possibilities for adopting the action of acoustic cavitation with respect to industrial applications

Contents:

Chapter 1. Acoustic Field and Bubbles  
Chapter 2. Dynamics of Acoustic Bubbles  
Chapter 3. Sonochemistry  
Chapter 4. Sonoluminescence  
Chapter 5. Experimental Methods in Sonochemistry  
Chapter 6. Applications in Chemical Engineering  
Chapter 7. Applications in Organic Synthesis  
Chapter 8. Applications in Inorganic Synthesis  
Chapter 9. Bio and Medical Applications  
Chapter 10. Applications in Environmental Technologies
