Systems Biology. Constraint-based Reconstruction and Analysis

Description: Recent technological advances have enabled comprehensive determination of the molecular composition of living cells. The chemical interactions between many of these molecules are known, giving rise to genome-scale reconstructed biochemical reaction networks underlying cellular functions. Mathematical descriptions of the totality of these chemical interactions lead to genome-scale models that allow the computation of physiological functions. Reflecting these recent developments, this textbook explains how such quantitative and computable genotype-phenotype relationships are built using a genome-wide basis of information about the gene portfolio of a target organism. It describes how biological knowledge is assembled to reconstruct biochemical reaction networks, the formulation of computational models of biological functions, and how these models can be used to address key biological questions and enable predictive biology. Developed through extensive classroom use, the book is designed to provide students with a solid conceptual framework and an invaluable set of modeling tools and computational approaches.

Contents: Preface;
1. Introduction;

Part I - Network Reconstruction:
2. Network reconstruction: the concept;
3. Network reconstruction: the process;
4. Metabolism in Escherichia coli;
5. Prokaryotes;
6. Eukaryotes;
7. Biochemical reaction networks;
8. Metastructures of genomes;

Part II - Mathematical Properties of Reconstructed Networks:
9. The stoichiometric matrix;
10. Simple topological network properties;
11. Fundamental network properties;
12. Pathways;
13. Use of pathway vectors;
14. Randomized sampling;

Part III - Determining the Phenotypic Potential of Reconstructed Networks:
15. Dual causality;
16. Functional states;
17. Constraints;
18. Optimization;
19. Determining capabilities;
20. Equivalent states;
21. Distal causation;

Part IV - Basic and Applied Uses:
22. Environmental parameters;
23. Genetic parameters;
24. Analysis of omic data;
25. Model driven discovery;
26. Adaptive laboratory evolution;
27. Model driven design;

Part V - Conceptual Foundations:
28. Teaching systems biology;
29. Epilogue; References; Index.
Ordering:

Order Online - http://www.researchandmarkets.com/reports/2905318/

Order by Fax - using the form below

Order by Post - print the order form below and send to

Research and Markets,
Guinness Centre,
Taylors Lane,
Dublin 8,
Ireland.
Fax Order Form
To place an order via fax simply print this form, fill in the information below and fax the completed form to 646-607-1907 (from USA) or +353-1-481-1716 (from Rest of World). If you have any questions please visit http://www.researchandmarkets.com/contact/

Order Information
Please verify that the product information is correct.

Product Name: Systems Biology. Constraint-based Reconstruction and Analysis
Web Address: http://www.researchandmarkets.com/reports/2905318/
Office Code: SCH3JX72

Product Format
Please select the product format and quantity you require:

<table>
<thead>
<tr>
<th>Quantity</th>

Payment Information

Please indicate the payment method you would like to use by selecting the appropriate box.

☐ Pay by credit card: You will receive an email with a link to a secure webpage to enter your credit card details.

☐ Pay by check: Please post the check, accompanied by this form, to:

Research and Markets,
Guinness Center,
Taylors Lane,
Dublin 8,
Ireland.

☐ Pay by wire transfer: Please transfer funds to:

<table>
<thead>
<tr>
