An ablation procedure is a minimally invasive process to remove unwanted tissue from the body by using various energy devices such as radiofrequency, microwave, ultrasound, electrical current, laser and others. The ablation devices are consisting of catheters, generators and other monitoring equipments. Ablation technologies are majorly employed for surgical procedures in cardiological disorders such as atrial fibrillation, arrhythmia, refractory hypertension and others; along with this, removal of cancerous and non cancerous tumors is also important application of ablation devices. As ablation surgeries are minimally invasive nature, it reduces post surgical complications and gives more accurate and successful results, therefore market for ablation technologies have high growth potential in coming future.

Global ablation technologies market is analyzed on the basis of technologies and applications. The technology component is further segmented into six major categories namely radiofrequency (RF), cryotherapy, ultrasound or High Intensity Focused Ultrasound (HIFU), light or laser, electrical, microwave and others. Whereas, the market by application is subcategorized into cardiology (includes renal denervation), gynecological (includes endometrial ablation), oncology, pain management, urology, ophthalmology (includes LASIK) and others. A detailed analysis and forecast for these segments of ablation technology market has been provided in this study, in terms of market revenue (USD million) for the period 2012 to 2020.
