Global Hodgkin's Lymphoma Therapeutics Market 2014-2018

Description:

About Hodgkin's Lymphoma

Hodgkin's Lymphoma (HL) is defined as the cancer of the lymph tissue, which is part of our immune system. The exact etiology of HL is unknown. However, the risk of developing the condition is increased if a person suffers from a medical condition that weakens the immune system. In HL, cells in the lymphatic system grow unusually and may spread beyond the lymphatic system. The infection-fighting properties of the lymphocytes are lost, making the person more susceptible to infection. The main treatments used are chemotherapy, followed by radiotherapy or chemotherapy alone. Generally surgery is not used as a treatment for the condition.

The analysts forecast the Global Hodgkin's Lymphoma Therapeutics market will grow at a CAGR of 6.84 percent over the period 2013-2018.
