Global Project and Portfolio Management Software Market 2014-2018

Description:

About Project and Portfolio Management Software

Project and portfolio management (PPM) software is a tool used by organizations to efficiently analyze and collectively manage a number of current or proposed projects based on various parameters. It is a significant part of the overall ERM package. It allows the management of the enterprise to obtain and view information about all the available projects. It then helps organizations to prioritize and sort each project based on parameters such as impact on resources, and strategic value. It provides better understanding on the collection of projects as a whole. It allows the project management team of the user-organization to add or remove items from the project execution process based on cost, benefits, and its long-term effects. The use of PPM software helps organizations to get a better return on their project investments.

The analysts forecast the Global PPM software market to grow at a CAGR of 11.25 percent over the period 2013-2018.
