Global Pneumococcal Vaccines Market 2014-2018

Description: About Pneumococcal Disease and Its Prevention

Pneumococcus (Streptococcus pneumonia), a pathogenic bacterium, is the leading cause of serious illness across the globe. It is the main cause of pneumonia, sinusitis, blood infections, meningitis, and middle ear infections (otitis media). Pneumococcal disease affects children and the elderly, and it is one of the leading infectious diseases worldwide. It kills almost 1.6 million people (including more than 800,000 children under the age five years) every year. Pneumococcal disease can be prevented by vaccination. Vaccination involves the introduction of dead or weakened antigen into the human body, which in turn produces lymphocytes to counter the infection and any future invasions by that antigen.

The analysts forecast the Global Pneumococcal Vaccines market to grow at a CAGR of 4.90 percent over the period 2013-2018.
