Global Nuclear Steam Generator (SG) Market 2014-2018

Description: About Nuclear Steam Generators

A nuclear steam generator is used to transfer heat from the primary loop to the secondary loop. This generator is linked between the primary loop and secondary loop to generate electricity from nuclear power plants. A piping system that contains coolant is called a primary loop, which is normally at very high pressure and temperature. A secondary loop consists of a separate piping system, where water is converted to steam to rotate turbines. Water flows through the primary loop never mix with water flows from the secondary loop.

The analysts forecast the Global Nuclear Steam Generator market to grow at a CAGR of 10.7 percent over the period 2013-2018.
