Global Coal Handling Equipment Market in the Mining Industry 2014-2018

Description: About Coal Handling Equipment

Coal handling systems form an integral part of a complete material flow and quality management system. In recent years, focus has shifted from optimizing single parts of the system to advanced automation solutions. Obstacles created by issues such as greenhouse gas emissions force many industrialized countries to consider exit strategies for long-term coal-fired power generation. However, coal still remains one of the most important sources of energy. With growing urbanization in many developing countries, the need for power is rapidly increasing, creating a high demand for coal. An increased need for efficiency in supplying coal in sufficient quantity and quality has led to a need for complete system optimization. Coal handling equipment is used to extract coal from its reserves or coal mines. Coal handling equipment includes surface mining equipment, underground mining machinery, crushing, pulverizing, and screening equipment, mining drills and breakers, and other equipment such as coal drills and portable drill rigs.

The analysts forecast the Coal Handling Equipment market in the Mining industry to grow at a CAGR of 8.05 percent over the period 2013-2018.
