Global Gamification Market 2014-2018

Description: About Gamification

Gamification is the process of implementing game mechanics into the non-gaming context, in order to better audience engagement and solve problems. Points, badges, leaderboards, challenges, and rewards are some of the examples of the game mechanics. It is not about creating the real games but to use game techniques to drive user engagement. From the loyalty program of businesses to educational video games, to rewarding school children for homework, people have always been trying to better merge work with play.

The analysts forecast the Global Gamification market to grow at a CAGR of 68.4 percent over the period 2013-2018.
