Renminbi: The Internationalization of China's Currency.

Description: Using stories and interesting examples, this book depicts the process of the internationalization of the main global currencies. After that, it systematically analyses the future pattern of the internalization of the Chinese currency the RMB and its possible influence on world trade and global finance. This book is very useful for professionals to understand the future of the RMB and its procedure of becoming a global currency.

With the boom of China's economy, the RMB is becoming a regional currency gradually, though still at a low level. Some predict that it will even change into a global currency. But this process cannot be easy. There are many financial problems for the government and private sectors to deal with. This book gives us a systematical analysis of those problems, especially those that emerge after the global financial crisis.

There are few books that refer to this area so systematically and thoroughly. RMB internationalization is one of the most interesting financial topics now.

Contents:

Preface
Introduction
