Vegetable Factories Market in Japan 2014-2018

Description: About Vegetable Factories

A vegetable factory is a facility that aids in steady production of high-quality vegetables by artificially controlling the cultivation environment (such as light, temperature, humidity, CO2 concentration, and culture solution). The control over the internal environment enables vegetable factories to produce vegetables about two to four times faster than through traditional outdoor cultivation. In addition, the use of multiple cultivation shelves (a multi-shelf system) facilitates the mass production of vegetables in a small space, reducing the requirement of cultivation land.

The analysts forecast the Vegetable Factories market in Japan to grow at a CAGR of 25.75 percent over the period 2013-2018.
