
Description: About Mass Transit Security

Mass transit security refers to the security systems used in mass transit locations to detect, monitor, and scan travelers and their belongings. Across the globe, the road, railroad, air, and sea transportation systems are designed for easy accessibility and convenience. However, due to growing crimes and terrorist attacks, various governments have taken certain qualitative measures to improve and protect infrastructure and public safety. As millions of people take public transportation, the need for their safety and security is of high importance. Past attacks such as 9/11 have brought a sense of panic among people. Therefore, there is a huge pressure on governments and transportation safety authorities to provide comprehensive solutions for protecting the infrastructure and the safety of people.

The analysts forecast the Global Mass Transit Security market to grow at a CAGR of 8.86 percent over the period 2013-2018.
