Global RF Devices Market for Set-top Boxes 2015-2019

Description:

About Set-top box (STB)

STBs are devices that are connected to a TV at the user's premises. These devices enable users to receive unencrypted subscribed channels through an addressable system for viewing encrypted channels. They connect a TV to an external signal source and transform the transmitted signal into video content, which is then displayed on screen. STBs can convert both analog and digital signals into visuals. There are four main types of STBs, namely cable, satellite, IPTV, and hybrid. STBs employ RF devices integrated with RF technology to perform uninterrupted TV services such as network personal, time-shifted TV, and video-on-demand. Besides STBs, RF devices are deployed in various wired and wireless communication devices such as cellphones, smart TVs, tablets, and radio sets. RF devices are designed and developed to work on various frequency bands depending on application requirements. The different types of RF devices available in the market are power amplifiers, filters, switches, tuners, duplexers, and demodulators.

The analysts forecast the Global RF Devices market for Set-top Box will grow at a CAGR of 9.26 percent in terms of revenue over the period 2014-2019.
