Global Type 2 Diabetes Therapeutics Market 2015-2019

Description:

About Type 2 Diabetes

Type 2 diabetes is a chronic condition, which arises due to either the inability of the body to produce enough insulin or insulin resistance, or both. Insulin is a peptide hormone produced by the Islets of Langerhans (pancreatic cells). It is produced in an immature form called preproinsulin, which is proteolytically cleaved to obtain proinsulin and then insulin. Type 2 diabetes nearly accounts for 90-95 percent of the total diabetic cases. Type 2 diabetes is usually diagnosed in middle-aged and older people; however, it can occur even during childhood. Type 2 diabetes was also known as adult-onset diabetes or non-insulin-dependent diabetes. Risk factors for type 2 diabetes include high blood pressure, advancing age, overweight, history of gestational diabetes, family history of diabetes, ethnicity, poor nutrition during pregnancy, unhealthy diet, physical inactivity, and IGT.

The analysts forecast the Global Type 2 Diabetes Therapeutics market to grow at a CAGR of 7.15 percent over the period 2014-2019.
