Global In Vitro Fertilization (IVF) & Male and Female Fertility treatment market, Industry Overview, Size, Share, Trends, Opportunities, Global Demand, Insights, Analysis, Research, Report, Segmentation and Forecast 2014 - 2020

Description:

Infertility, in the 21st century, is a global issue with thousands of couples facing it. The market is segmented on the basis of male and female infertility. Male infertility has various causes which may be genetically occurring-pertaining to hormonal imbalances, DNA damage and use of tobacco or due to sexually transmitted disease among other unspecified reasons. Female infertility can be either be genetically diagnosed or acquired with age, STDs, chemotherapy, tobacco induced or weight factors etc. Infertility affects men and women alike, worldwide and they face varying cultural and social stigmas. Given that this is a commonly found medical condition, the infertility treatment market is rapidly expanding. Besides the standard methods of treatment, which are surgical, drug and hormonal therapy, assisted reproductive treatments (ART), with technological advancements, have opened new doors for providing solutions for the male and female infertility issues.

ART refers to the methods used to achieve pregnancy through artificial or partially artificial, clinical means. The last decade has witnessed a steady increase in the number of practices being setup either completely dedicated to this service, or offering it in addition to existing treatments. Procedures involved in this treatment include fertility medication, artificial insemination, and surrogacy among others, with in vitro fertilization (IVF) being the most popular. Although this market steadily expands all-round the globe, India, China and Mexico are the fastest growing markets for IVF as they are popular destinations for medical tourism.
