
Description:

In customer analytics, each solution and service plays an important role in the overall market. These solutions and services support a broad spectrum of multi-functional applications such as customer acquisition, retention, loyalty management, behavioral analysis, predictive analysis, pattern analysis, customer segmentation, and various others. The customer analytics is the process of integrating multiple channels over a single platform to give a better understanding about the customer behavior enabling the marketers to make better business decisions in real time. The solution provides multi-dimensional perceptions about the business and its associated customers. As the web analytics solutions reflect the online buyer's response to the online marketing activities; but it is not capable of analyzing the offline purchasing behavior of a customer over offline marketing or how does offline marketing affects the online buying behaviors of a customer. The key identification points of the customer analytics are the customer's behavior pattern, traffic rates and advertising impact analysis which eventually helps in customer acquisition and convert potential customer into an actual buyer.

Most of the small and medium businesses (SMBs) as well as large enterprises are focusing on gaining strong insights out of the unstructured customer data for attaining enhanced marketing effectiveness by making improved business strategies and decisions. This would further help reduce causes of customer attrition and hence assist retailers in providing enhanced customer experience. The customer analytics solutions also help the digital retailers in ad campaign management, customer segmentation and loyalty management.
