Constant currency rates have been considered while estimating the forecast in this report. Prices of anti-reflective coatings and its product segment vary in each region; hence, a similar volume-to-revenue ratio does not follow for each individual region. The same price for each end-user has been taken into account while estimating and forecasting market revenue on the global basis. Regional average price has been considered while breaking down this market by end-user segment in each region. Models and estimates have been used to produce comprehensive data sets when hard data was not available. We have used the bottom-up approach by considering individual end-user segments and integrating them to arrive at the global market. End-users have been further bifurcated using the top-down approach to derive the consumption of products in the regional market.

In order to compile the research report, we conducted in-depth interviews and discussions with a wide range of key industry participants and opinion leaders. Primary research represented the bulk of research efforts, supplemented by an extensive secondary research. We reviewed key players' product literature, annual reports, press releases and relevant documents for competitive analysis and market understanding.
