Global Laptop Battery Market 2015-2019

Description: About Laptop Battery
The laptop battery is a rechargeable battery that stores and produces energy for proper functionality of the device. Almost all laptop models use lithium-ion, or "Li-ion" batteries. These batteries generate power or energy when ions move from a negatively charged anode to the positively charged cathode. When the battery discharges, the ions move from the anode to the cathode, releasing energy, which is then used by the laptop. On the other hand, during the charge, electricity from the adapter forces the ions to return to the anode in the battery. Once the adapter is removed, this cycle starts all over again.

The analysts forecast the Global Laptop Battery market to grow at a CAGR of 6.39 percent over the period 2014-2019.
