Antidepressant Market in the US 2015-2019

Description: About Depression
According to the WHO, depression is a common mental disorder which contributes significantly to the global burden of disease. It affects people across communities in the world. It is characterized by sadness, loss of interest or pleasure, feelings of guilt or low self-worth, disturbed sleep or appetite, feelings of tiredness, and poor concentration, as stated by the WHO. Depression can roughly be categorized into six different types. A patient with severe depression can have suicidal thoughts or behaviors. According to a 2012 WHO estimate, approximately 3,000 suicides take place each day, resulting in more than a million deaths per annum.
Depression can be recurrent, and can be severely debilitating for an individual. In patients with mild depression, the patient can be treated with medications, and in moderate or severe depression, a patient needs both medication and professional psychotherapy in terms of counseling. It has been reported by the WHO in 2008, that depression equally affects men and women, but women have a 50 percent higher tendency to get affected by depression than men. According to the CDC, depression can lead to adverse behavioral traits in an individual such as, alcoholism, smoking, and sleep disturbance. According to the CDC factsheet, one out of every 10 people is affected with depression in the US. Major depressive disorder is among the most debilitating disorders in the US, and affects approximately 14.8 million adults in the country, aged 18 years and above, according to the NIMH in the US.

The analysts forecast the Antidepressant market in the US to grow at a CAGR of [4.08] percent over the period 2014-2019.
