Global Endpoint Security Market 2015-2019

Description:
About Endpoint Security
Endpoint security is a methodology that helps protect corporate networks when they are accessed remotely through laptops, tablets, and smartphones. Endpoint security solutions help detect a potential intrusion and mitigate security threats. Endpoint security consists of two components: security software and client software. Security software are centrally located and installed on a server within the company's network. However, client software are installed on every external device connected to the home network. The security software server or gateway verifies the logins from the endpoints and regularly update the software of the connected end-user devices.

The analysts forecast the Global Endpoint Security market to grow at a CAGR of 10.4 percent over the period 2014-2019.
