Global Airport E-gates Market 2015-2019

Description:
About Airport E-gates
E-gate is a system found at the arrival and departure gates of the airport, which validates the identity of passengers using various technologies such as iris scanning, fingerprint scanning, and face scanning. Airports worldwide are struggling to maintain security vigilance with the increasing number of passengers. Airport e-gates help in ensuring the correct identity of a person. They reduce the processing time that is normally taken for checking the passengers, thereby reducing the congestion and immigration wait time. Hence, airport e-gates can replace border agents and ease the security process.

The analysts forecast the Global Airport E-gates market to grow at a CAGR of 17.91 percent over the period 2014-2019.
