Global Identity and Access Management (IAM) Market 2015-2019

Description:
About IAM
IAM is a solution that helps end-users to ensure that access across multiple technological environments is granted only to the right individuals. IAM solutions provide secure, identity-based access to various systems, applications, and information from any location. IAM solutions help enterprises manage security across various systems by permitting employees access with a single sign-on password. Thus, IAM solutions are able to avoid fraudulent activities, thereby preventing the misuse of data. Hence, IAM solutions are being widely adopted by large and medium-scale enterprises as well as government departments.

The analysts forecast the Global Identity and Access Management market to grow at a CAGR of 12.90 percent over the period 2014-2019.
